

Change Alias ID
Version 120
18Jul2005

The CALiasID freeware tool from GreenHouse allows an easy change of the user ID of any Alias user to a new ID (= number).

The trick is, that ALL Alias attributes, including the original password, are migrated to the new Alias user.

Command syntax:

```
[run] CALIASID [/OUT <file>/] -H[ELP]
[run] CALIASID [/OUT <file>/] <Alias> [TO] <NewID>
```

where:

```
<file>      OUT file
-H[ELP]     causes SHOWUSER to display help information.
<Alias>     is the Alias name to be changed;
             Alias users are case sensitive!
TO          optional filler key word to make the command readable.
<NewID>     the new target GUARDIAN ID of the Alias user;
             numeric ID (e.g. 100,5) as well as named format
             (e.g. ghs.carl) are supported.
             GUARDIAN user names are NOT case sensitive!
```

To successfully change the ID of an Alias user, you must be:

- SUPER.SUPER, or
- the owner of the
 = <Alias> user
 AS WELL as the owner of the
 = GUARDIAN user of <New-ID>

e.g.

```
CALIASID                - displays the help screen
CALIADID Gerhard TO 200,5 - changes the GUARDIAN ID of
CALIADID CarlWeber TO ghs.carl  the Alias user
```

CALiasID needs to become licensed.

Recommended security settings are:

```
Owner:                SUPER.SUPER
GUARDIAN Security:   "OOAO"
Licnesed:             YES
Prod ID               NO
SAFEGUARD ACLs:      optional, Reflecting "OOAO"
```

Feel free to use this tool, and to distribute it.

In case you stumble into problems, please let me know:
CALiasID is a supported freeware tool from GreenHouse!
