

INTRAL - Intrusion Alerter - performs a real time evaluation of incoming SAFEGUARD log events. When a given threshold is exceeded, an alarm is generated.

Command syntax:

INTRAL (100) - T7172G03 - (13Aug1999) System \BEECH, running NSK G06
Copyright (c) GreenHouse Software & Consulting 1999

Command syntax is:

```
[run] INTRAL[/OUT[<file>]][-H][10s][10s,1min,10min,1h]
```

where

<file>	defines an OUT file.
-H	causes INTRAL to display help information
10s	defines the 10 second value
	if no other values are given, it is used to calculate the 1min, 10min and 1h value as follows:
	1min := 10s *6 -10s
	10min := 1min*10-1min
	1h := 10min* 6-10min
	In case all four values are present, they will be used.

You must be SUPER.SUPER to successfully execute INTRAL.
