

PWEXP is freeware from GreenHouse Software & Consulting

PWEXP displays the password expiration values of a given set of system users.

SAFEGUARD is NOT required to run!

You have to be logged on to SUPER.SUPER to make this program work.

Command syntax is:

```
[run] PWEXP[/OUT[<file>]/][<user>]
```

where

<user> is a template, defining the users to check;  
wildcards are supported  
GUARDIAN user names are NOT case sensitive, while  
Alias user names are!

e.g.

PWEXP displays the password expiration attributes of all users  
(GUARDIAN as well as Alias users).  
PWEXP \* does the same.

PWEXP Carl\* displays the password expiration attributes of those users,  
matching the given name template  
(GUARDIAN as well as Alias users).
