PROGID is a FreeWare tool from GreenHouse.

It allows you to set the PROGID flag of a disk file without
the need to be the owner of the file.

Command syntax is:

  [run] PROIGID <disk-file> [OFF] | -H[ELP]

where:
  <disk-file> is a fully qualified disk file name
  OFF   is a keyword; when present, the PROGID flag of
              <disk-file> is removed.
  -H[ELP]   causes PROGID to display this screen.

PROGID is a SECOM supportive utility and should be controlled through a
SECOM command.

The security settings should be:

Owner: sec.admin (= system security administrator)
Security: "OOOO"
Licensed: YES
