

TraceLog
=====

The TraceLog (trace log file) utility traces a chain of SAFEGUARD audit records and checks for broken links.

Command syntax is:

```
TRACELOG [/OUT <file>/] [-H[ELP]]  
                [<SFG-audit-file>] [UP|DOWN]
```

where:

SFG-audit-file	is a SAFEGUARD audit tape file
UP	causes TraceLog to display the audit file in question, and its successors
DWON	causes TraceLog to display the audit file in question, and its predecessors
